Amendments to the Claims

Listing of Claims:

Claims 1-13 (cancelled)

5

Claim 14 (previously presented) : An apparatus for adjusting a phase difference

between two input signals, the apparatus comprising:

a first buffer for buffering a first input signal and outputting a first output
signal;

10

a first DAC for outputting a first control voltage corresponding to a first digital
value representative of a phase delay;

a first variable capacitor coupled to the first DAC and the first buffer, the
capacitance value of the first variable capacitor corresponding to the first
control voltage;

15

a second buffer for buffering a second input signal and outputting a second
output signal;

a second DAC for outputting a second control voltage corresponding to a
second digital value representative of a phase delay; and

20

a second variable capacitor coupled to the second DAC and the second buffer,
the capacitance value of the second variable capacitor corresponding to
the second control voltage;

wherein by controlling at least one of the first and the second digital values, the
phase difference between the first input signal and the second input signal
are adjusted.

25

Claim 15 (previously presented) : The apparatus of claim 14 being implemented in a
receiver.

Appl. No. 10/710,175

Claim 16 (previously presented): The apparatus of claim 14 being implemented in a transmitter.

5 Claim 17 (previously presented): The apparatus of claim 14 being implemented in a transceiver.

Claim 18 (previously presented): The apparatus of claim 14, wherein the first input signal and the second input signal are differential signals.

10 Claim 19 (previously presented): The apparatus of claim 14, wherein the first input signal and the second input signal are an in-phase signal and a quadrature-phase signal respectively.

15 Claim 20 (previously presented): The apparatus of claim 14, wherein the first input signal and the second input signals are clock signals.

Claim 21 (previously presented): The apparatus of claim 14, wherein the first input signal and the second input signal are RF signals.

20 Claim 22 (previously presented): The apparatus of claim 14, wherein the first variable capacitor and the second variable capacitor are voltage-controlled capacitors.

25 Claim 23 (previously presented): The apparatus of claim 22, wherein the voltage-controlled capacitors are MOS-based voltage-controlled capacitors.

Claim 24 (previously presented): The apparatus of claim 22, wherein the

Appl. No. 10/710,175

voltage-controlled capacitors are P+/N well junction voltage-controlled capacitors.

Claim 25 (previously presented) : A method for adjusting a phase difference between
5 two input signals, the method comprising:

buffering a first input signal and outputting a first output signal;
buffering a second input signal and outputting a second output signal;
providing at least one of a first digital value and a second digital value
representative of a first phase delay and a second phase delay respectively;
10 and

adjusting a capacitance value of a first variable capacitor with a first control
voltage generated from the first digital value or adjusting a capacitance
value of a second variable capacitor with a second control voltage
generated from the second digital value, to adjust the phase difference
15 between the input signal and the output signal.

Claim 26 (previously presented) : The method of claim 25, wherein the first input
signal and the second input signal are differential signals.

20 Claim 27 (previously presented) : The method of claim 25, wherein the first input
signal and the second input signal are an in-phase signal and a quadrature-phase
signal respectively.

Claim 28 (previously presented) : The method of claim 25, wherein the first input
25 signal and the second input signals are clock signals.

Claim 29 (previously presented) : The method of claim 25, wherein the first input

signal and the second input signal are RF signals.

Claim 30 (previously presented) : The method of claim 25, wherein the first variable capacitor and the second variable capacitor are voltage-controlled capacitors.

5

Claim 31 (previously presented) : The method of claim 30, wherein the voltage-controlled capacitors are MOS-based voltage-controlled capacitors.

Claim 32 (previously presented) : The method of claim 30, wherein the voltage-controlled capacitors are P+/N well junction voltage-controlled capacitors.
